EDUCATION

Lovely Professional University, Phagwara, Punjab – *B.Tech, Computer Science & Engineering* | *CGPA: 8.1* Aug 2022 – Present

Relevant Coursework: Machine Learning, Deep Learning, Natural Language Processing, Transformers & LLMs, Data Structures & Algorithms, Database Management Systems, Statistics

Sri Chaitanya Junior College, Hyderabad – *Intermediate* | *96.8%* Apr 2021 – May 2022

INTERNSHIP

Programmer Analyst Trainee – *Cognizant Technology Solutions (GenC Program)* Jan 2026 – Present

- Gained hands-on exposure to **end-to-end ML platform workflows** — working across model development, testing, deployment pipelines, and monitoring frameworks within an enterprise-grade engineering environment aligned to MLOps practices.
- Collaborated with cross-functional engineering teams in an **Agile sprint-based environment** — engaging in system design discussions, service orchestration decisions, and iterative delivery cycles alongside senior engineers and subject matter experts.
- Developed strong foundations in **Python-based automation, SQL, REST API integration**, and data pipeline design — applying structured testing, validation, and documentation practices to deliver production-quality solutions under real project timelines.

SKILLS

GenAI & LLMs:	Groq API, LangChain, LlamaIndex, Azure OpenAI (familiar), Llama (open-source), Prompt Engineering (Zero-shot, Few-shot, CoT)
ML & NLP:	Scikit-learn, TensorFlow (familiar), PyTorch (familiar), Transformers, NLP Pipelines, Classification, Regression, Ensemble Methods
Languages:	Python (primary), SQL, Java, Kotlin
MLOps & Infra:	Hugging Face Spaces (deployed), Gradio, Docker, GIT/GitHub, Jenkins CI/CD, Maven, REST APIs, Postman
Data & Analytics:	NumPy, Pandas, Matplotlib, Tableau, EDA, Predictive Analysis, Data Preprocessing, Data Visualization

PROJECTS

DataGroq – LLM-Based Analytics Platform *[Live]* *Groq API, Python, NLP, LangChain, Gradio, HuggingFace* | *Sept 2025*

- Developed and deployed a **Generative AI-powered analytics solution** leveraging Groq LLM API to enable intuitive, conversational Q&A over **200+ documents and datasets** — accelerating end-user workflows and reducing manual analysis time by **70%**.
- Engineered end-to-end **NLP pipelines** for text preprocessing (tokenization, stopword removal, lemmatization), document classification, and keyword extraction — integrating with LLM inference endpoints to deliver structured, actionable insights with **30% improved accuracy**.
- Designed the full **model serving and deployment pipeline** on Hugging Face Spaces — including input validation guardrails, safe code execution, EDA visualizations, and ML model performance monitoring — demonstrating MLOps practices from model development through production deployment.

Sentiment Strategy Comparison – NLP Model Development & Evaluation *Python, TextBlob, Naive Bayes, Transformers, Prompt Engineering, Gradio* | *Dec 2024*

- Developed and benchmarked **6 NLP sentiment analysis models** — classical ML (TextBlob, Naive Bayes), and Generative AI strategies (Zero-shot, One-shot, Few-shot, Chain-of-Thought) — on **1,000+ labeled product reviews**, achieving **96.8% accuracy** with Naive Bayes.
- Applied **prompt engineering techniques** (CoT, few-shot) to probe and evaluate LLM reasoning quality — analysing performance gaps between classical ML and generative AI approaches with documented tradeoffs on accuracy, latency, and interpretability across all strategies.
- Deployed an interactive Gradio-based **model experimentation interface** for real-time strategy comparison; visualized comparative performance via radar charts and bar graphs — enabling data-driven model selection aligned with downstream analytics requirements.

Traffic Analysis Dashboard – Big Data Analytics Pipeline *Python, Geoapify APIs, Google Sheets API, Tableau* | *Jan–Feb 2025*

- Designed and implemented an **end-to-end analytics data pipeline** integrating multiple external REST APIs (Geoapify, Google Sheets) with automated extraction, transformation, and loading into a dynamic Tableau dashboard — **reducing manual effort by 80%** with full automation post-deployment.
- Applied Python-based data preprocessing to standardize and validate inputs from heterogeneous sources — building consistency checks and structured error handling to ensure reliable, production-quality pipeline output contributing to a **15% increase in operational efficiency**.
- Delivered geospatial analytics capabilities and real-time data visualization — enabling business SMEs to make **data-driven decisions** intuitively through a self-updating dashboard, reducing dependency on manual reporting and accelerating insight delivery cycles.

CERTIFICATIONS & ACHIEVEMENTS

Introduction to Machine Learning – NPTEL (Oct 2024) | **Data Visualization with Tableau** – Coursera (Nov 2024) | **Python, Java & SQL** – HackerRank (Jan 2025)

Achieved **5-Star rating in SQL** on HackerRank (Feb 2025) | Active Open Source Contributor & Hackathon Participant
