EDUCATION

Lovely Professional University, Phagwara, Punjab – *B.Tech, Computer Science & Engineering* | *CGPA: 8.1* Aug 2022 – Present

Relevant Coursework: Natural Language Processing, Deep Learning, Machine Learning, Transformers & LLMs, Information Retrieval, Statistics & Probability, Database Management Systems

Sri Chaitanya Junior College, Hyderabad – *Intermediate* | *96.8%* Apr 2021 – May 2022

INTERNSHIP

Programmer Analyst Trainee – *Cognizant Technology Solutions* Jan 2026 – Present

- Worked across a full backend-aligned engineering stack — Java, Python, Maven, GIT/GitHub, Jenkins CI/CD, Docker — developing strong scripting, automation, and structured documentation habits aligned with security workflow automation requirements.
- Collaborated with senior engineers in an Agile sprint-based environment — participating in system design discussions, incident documentation, and iterative delivery cycles under real deadlines with weekly deliverable targets and performance evaluations by BU Subject Matter Experts.

SKILLS

LLM & GenAI:	Groq API, OpenAI API (familiar), Anthropic Claude (familiar), LangChain, LlamaIndex, RAG pipelines, Prompt Engineering (Zero-shot, Few-shot, CoT)
NLP & ML:	Transformers, embeddings, semantic search, tokenization, NLP pipelines, Scikit-learn, PyTorch (familiar), TensorFlow (familiar), fine-tuning (familiar)
Vector & Search:	ChromaDB (familiar), Pinecone (familiar), semantic search, embedding models, intelligent querying, document retrieval
Languages & Data:	Python (primary), SQL, Java, Kotlin | NumPy, Pandas, Matplotlib, Tableau, EDA, Data Visualization
Infra & Tools:	Docker, GIT/GitHub, REST APIs, Postman, Hugging Face Spaces (deployed), Gradio, Jenkins, Maven

PROJECTS

DataGroq – RAG-Powered Document Intelligence System *Groq API, LangChain, Python, NLP, RAG, Gradio, HuggingFace* | *Sept 2025*
[Live]

- Built and deployed an intelligent document processing system using Groq LLM API and RAG architecture — enabling natural language querying over **200+ documents** with semantic retrieval, context synthesis, and structured response generation reducing manual analysis time by **70%**.
- Engineered end-to-end NLP pipelines for unstructured data extraction — tokenization, lemmatization, document classification, and keyword extraction — integrating with LLM inference endpoints to deliver domain-specific, actionable insights with **30% improved accuracy**.
- Designed an agentic query processing workflow with safe code execution guardrails, EDA-driven metric extraction, and interactive visualizations — demonstrating multi-agent architecture patterns for complex analytical workloads over real-world unstructured data.

Sentiment Strategy Comparison – LLM Evaluation & Benchmarking Pipeline *Python, TextBlob, Naive Bayes, Transformers, Prompt Engineering, Gradio* | *Dec 2024*

- Designed a rigorous LLM evaluation and benchmarking framework comparing **6 NLP strategies** — TextBlob, Naive Bayes, Zero-shot, One-shot, Few-shot, and Chain-of-Thought — on **1,000+ labeled reviews**, systematically measuring accuracy, latency, and interpretability tradeoffs.
- Applied domain-specific prompt engineering (CoT, few-shot) to optimize LLM reasoning quality — identifying failure modes in generative approaches (avg. **41% accuracy**) vs classical ML (**96.8% accuracy**) with documented benchmarking insights for downstream model selection.
- Deployed an interactive model experimentation interface on Gradio for real-time strategy comparison — visualizing performance via radar charts and bar graphs, enabling rapid prototyping and evaluation of new prompt architectures aligned with intelligent querying requirements.

Traffic Analysis Dashboard – Intelligent Data Extraction Pipeline *Python, Geoapify APIs, Google Sheets API, Tableau* | *Jan–Feb 2025*

- Built an AI-powered data extraction pipeline integrating multiple external REST APIs (Geoapify, Google Sheets) — automating extraction, transformation, and semantic standardization of real-time data, **reducing manual effort by 80%** with zero manual intervention post-deployment.
- Applied Python-based preprocessing and structured validation to standardize heterogeneous API inputs — implementing consistency checks and anomaly detection contributing to a **15% increase in operational efficiency** through reliable, automated data ingestion.
- Delivered a dynamic Tableau dashboard enabling real-time geospatial analytics and intelligent querying of operational metrics — making complex data insights intuitively accessible to business stakeholders through well-designed, self-updating visualization layer.

CERTIFICATIONS & ACHIEVEMENTS

Introduction to Machine Learning – NPTEL (Oct 2024) | **Data Visualization with Tableau** – Coursera (Nov 2024) | **Python, Java & SQL** – HackerRank (Jan 2025)

Achieved **5-Star rating in SQL** on HackerRank (Feb 2025) | Active Open Source Contributor & Hackathon Participant
