EDUCATION

Lovely Professional University, Phagwara, Punjab – *B.Tech, Computer Science & Engineering* | *CGPA: 8.1* Aug 2022 – Present

Relevant Coursework: Network Security, Operating Systems, Data Structures & Algorithms, Database Management Systems, Machine Learning, Python Programming

Sri Chaitanya Junior College, Hyderabad – *Intermediate* | *96.8%* Apr 2021 – May 2022

Disney Land High School, Warangal – *Matriculation* | *100%* Apr 2019 – Mar 2020

INTERNSHIP

Programmer Analyst Trainee – *Cognizant Technology Solutions* Jan 2026 – Present

- Worked across a full backend-aligned engineering stack — Java, Python, Maven, GIT/GitHub, Jenkins CI/CD, Docker — developing strong scripting, automation, and structured documentation habits aligned with security workflow automation requirements.
- Collaborated with senior engineers in an Agile sprint-based environment — participating in system design discussions, incident documentation, and iterative delivery cycles under real deadlines with weekly deliverable targets and performance evaluations by BU Subject Matter Experts.

SKILLS

Languages:	Python (primary — automation & scripting), Java, Kotlin, SQL, Bash (familiar)
Security:	Log analysis, threat detection, anomaly detection, incident triage, vulnerability assessment, security documentation
Networking:	TCP/IP, DNS, HTTP/S, REST APIs, network traffic analysis, IP-based access monitoring
Data & ML:	Pandas, NumPy, Matplotlib, Scikit-learn, Regex, EDA, Predictive Analysis, Tableau, Data Visualization
Tools & Infra:	GIT/GitHub, Linux (familiar), Windows, Docker (familiar), Postman, REST Assured, Jenkins

PROJECTS

Security Log Analyzer & Threat Detection Tool *Python, Pandas, Regex, Matplotlib* | *Mar 2025*

- Developed a Python-based security log analysis tool that parses system and server log files using Regex, automatically detecting suspicious patterns such as failed login attempts, brute-force attacks, and unauthorized IP access — simulating real-world SOC threat monitoring workflows.
- Implemented automated anomaly detection using Pandas to flag high-frequency events, identify unusual access patterns, and generate structured threat summary reports — reducing manual log review effort by **60%** and enabling faster incident triage.
- Visualized security event trends using Matplotlib — including failed login frequency charts, IP-based threat heatmaps, and suspicious activity timelines — producing documentation-ready outputs aligned with incident response and audit reporting requirements.

DataGroq – AI-Powered Document Analysis Assistant *Groq API, Python, NLP, ML, Data Visualization* | *Sept 2025*

- Built and deployed an AI-powered document analysis pipeline using Groq API for conversational Q&A over **200+ documents** — engineered with input validation guardrails and safe Python code execution to ensure secure, controlled interaction with sensitive data inputs.
- Implemented end-to-end NLP workflows (tokenization, lemmatization, classification, keyword extraction) with structured output validation — improving analytical accuracy by **30%** and reducing manual analysis time by **70%** through automated insight generation.
- Designed modular, well-documented pipeline components with clear separation of data ingestion, processing, and output layers — producing maintainable, audit-ready code aligned with security documentation and procedural standards.

Traffic Analysis Dashboard – Multi-API Data Pipeline *Python, Geoapify APIs, Google Sheets API, Tableau* | *Jan–Feb 2025*

- Engineered an automated data pipeline integrating multiple external REST APIs (Geoapify, Google Sheets) — applying Python-based preprocessing, validation, and structured error handling to ensure reliable, tamper-evident data flow reducing manual effort by **80%**.
- Implemented data consistency checks and anomaly flags across API response inputs — detecting malformed or unexpected data patterns before ingestion, contributing to a **15% increase in operational efficiency** through reliable, automated data processing.
- Delivered a dynamic Tableau dashboard enabling real-time geospatial analysis and data-driven decision-making — producing clear, audit-aligned visual outputs that communicated risk and operational insights effectively to non-technical stakeholders.

CERTIFICATIONS & ACHIEVEMENTS

Introduction to Machine Learning – NPTEL (Oct 2024) | **Data Visualization with Tableau** – Coursera (Nov 2024) | **Python, Java & SQL** – HackerRank (Jan 2025)

Achieved **5-Star rating in SQL** on HackerRank (Feb 2025) | Active Open Source Contributor & Hackathon Participant
